

PSYCHOLOGY

Major in Psychology

The Bachelor of Science in Psychology program encourages undergraduate students to fully explore the multidisciplinary field of psychological science. Defined as the science of behavior and conscious experience, the field of psychology spans the social and developmental sciences, the biological and biomedical sciences, and the disciplines related to mental health. Serious efforts have been made at Georgia College to employ doctoral level faculty members representative of the various specialties within psychology who have a strong commitment to teaching at both the undergraduate and graduate levels.

Students in the Department of Psychological Science regularly participate in faculty-sponsored research activities. Many of these efforts result in professional publications in peer-reviewed scientific journals and/or presentations at professional conferences in the psychological sciences. The faculty also actively supervise many students in applied settings where students participate in the practice of psychology. Through teaching, research, and mentorship the Department of Psychological Science instills respect for multiple viewpoints and approaches while inspiring intellectual curiosity and personal growth.

Make an Impact

The breadth and depth of knowledge gained will prepare graduates for a variety of career paths...
