

MANAGEMENT INFORMATION SYSTEMS

Major in Management Information Systems

The Management Information Systems (MIS) program at Georgia College develops in-depth hands-on knowledge and skills in the application of information technology to problems and opportunities in business and society.

This program is particularly well suited for students who enjoy solving problems and life-long learning. Students get hands-on experience with technologies such as SAP, PowerBI, Tableau, Python, SQL Server, and LabSim. Combining these technologies with theory in analysis, agile development, and business intelligence, students learn to apply technology to business problems.

MIS graduates are ready for today's business environment and start careers in areas like consulting, data analytics, project management, software development, IT networking, or IT support. Over the last few years, for example, multiple graduates have accepted job offers from Accenture, EY, NCR, and Sogeti. These firms and many others attend the annual IT Career Fair to recruit GC students.

Make an Impact

The breadth and depth of knowledge gained will prepare graduates for a variety of career paths...

- Business Systems Analyst
- Project Manager
- Computer Programmer
- Web Developer
- Database Administrator
- Information Assurance Analyst
